INDUSTRIAL ACCIDENT STATISTICS, SEPTEMBER QUARTER 1966

The increase in industrial activity throughout the world has been accompanied by an emphasis on the problem of industrial accidents and diseases. Realising the seriousness of the economic loss, as well as the personal suffering, caused by this problem, the Bureau of Census and Statistics, in collaboration with the Division of Occupational Safety of the State Department of Labour and Tourism, is developing a series of statistics of industrial accidents. In this work an attempt has been made not only to meet the requirements of the Division of Occupational Safety but also to conform to standards set by the International Labour Organisation for the international comparison of industrial accident statistics.

The Workers' Compensation Department of the Queensland State Government Insurance Office is the only body authorised to issue industrial accident insurance policies in Queensland under the provisions of "The Workers' Compensation Acts, 1916 to 1966". Statistics of industrial accidents have been extracted from claims finalised, or for which three years since lodgment had elapsed, during the quarter ended 30 September 1966. It should be emphasised that the details of industrial accidents presented in this bulletin refer to claims finalised or becoming three years old during the periods specified and therefore should not be regarded as statistics of industrial accidents which "occurred" during those periods.

This bulletin will be published quarterly. It is intended that certain details relating to work injuries (Tables 1 to 8) will be regularly published each quarter. Other classifications of work injuries and details relating to occupational diseases will not appear regularly but will be treated periodically as special topics. In this issue, the special topic is devoted to the latest available annual figures on occupational diseases (Tables 9 to 12).

Of the 10,844 work injury claims finalised during the quarter ended 30 September 1966, 10,186, or 93.9 per cent, were for males and 658, or 6.1 per cent, for females. During the period 32 fatal accident claims were finalised, all for males. Total time lost through temporary disabilities amounted to 208,576 days for males and 10,976 days for females.

An analysis of all claims finalised during the September quarter shows that 97.8 per cent of the injuries were of a temporary nature, 1.9 per cent resulted in permanent disabilities, and 0.3 per cent were fatal. The most common injury to both sexes was lacerations and open wounds, 29.1 per cent of all accidents for males and 30.9 per cent for females. Sprains and strains were the next most common injury for both sexes.

The average number of days lost by male employees through temporary disabilities was 21.0. The highest average absence (38.9 days) was in the Mining and Quarrying industry and the lowest (14.1 days) in the Meat and Fish Processing industry. Of all temporary disabilities to males, 36.7 per cent were of less than one week's duration. The average number of days lost by female employees through temporary disabilities was 16.9. The highest average absence (34.9 days) was in the Primary Production industry and the lowest (9.2 days) in the Textile and Clothing Manufacturing industry. Of all temporary disabilities to females, 38.2 per cent were of less than one week's duration.

BRISBANE 4000

17 August 1967

Inquiries concerning these statistics may be made by telephoning  
Brisbane 33 5011, Extension 119.

Explanatory NotesScope and Coverage

Coverage is necessarily limited by the Workers' Compensation Acts. Although all employers are required by legislation to apply for a policy to cover all workers employed by them, these statistics cannot purport to represent all industrial accidents occurring in the State. The chief deficiencies are:

- (a) Self-employed persons are not obliged to insure under the Act. They may insure voluntarily, but those who do so represent only a small proportion of all self-employed persons, limiting the coverage of persons in the Primary Industries particularly.
- (b) Commonwealth Public Servants are excluded from the provisions of the State Act, thus limiting the coverage of persons in the Communications Industry (e.g., P.M.G.).
- (c) Members of the Queensland Police Force are also excluded from the provisions of the Act.

By definition, the scope of the collection is limited to include only those injured employees who lost at least a full shift from work as a result of the accident. This bulletin contains particulars of "first reports" of claims finalised during the quarter. (Details have been extracted for re-opened claims where disabilities recurred, but no analysis is yet available.) Accidents occurring during recess periods or on journey to or from work are excluded.

Definitions

An Industrial Accident is defined as any compensated work injury or a compensated occupational disease causing death or permanent disability, or the temporary disability of the injured person during the entire interval corresponding to the hours of his or her regular shift on any one or more calendar days subsequent to the date of the injury.

Fatal injuries are so classified regardless of the time intervening between injury and death, providing that death occurs within three years of the intimation of the claim.

Permanent Disability is an injury or disease which does not cause death but which results in the complete loss or loss of use of any member or part of a member of the body, or any permanent impairment of functions of the body or part thereof.

Temporary Disability is any injury which does not result in death or permanent impairment, but which renders the injured person unable to perform a regularly established job during the entire time interval corresponding to the hours of a full, regular shift.

Accident Factor is defined as the means by which, or the circumstances under which, industrial injuries occur.

General Comment

Special note should be made of the distinctions between "Injury" and "Disease" cases for the compilation of these statistics.

Some diseases or infections may result either from a minor injury or from some continuous action or sustained exposure to a harmful medium without any evidence of an injury. However, where there is any evidence at all that a disease has resulted from an initial injury, then the episode is classified as an injury rather than a disease (e.g., conjunctivitis and corneal ulcers resulting from foreign body in the eye, flying particles or scratches to the cornea; bursitis or cellulitis resulting from bruising or crushing; displacement of intervertebral disc (slipped disc) resulting from sprains and strains). On the other hand, teno-synovitis caused purely by continuous movements of a joint is treated as a disease. Miscellaneous reactions of the body to effects of poisons and weather etc. are included with work injuries as "other injuries" in the nature of injury classification.

Occupational Diseases

The International Labour Office distinguishes an occupational disease from a work injury in that it exhibits one or more of the following characteristics:

- (i) The slow and protracted nature of its cause.
- (ii) Its ascribability to repeated or continuous action of a mechanical, physical, or chemical cause. It is not the effect of a single event but of a cause acting imperceptibly and constantly.
- (iii) Indeterminateness of the time of its beginning due to its slow and insidious development.
- (iv) The possible importance of individual predisposition as a factor in the development of the pathological conditions.

Cases of occupational diseases which have been precipitated or aggravated by some accidental event are classified to the antecedent accident rather than the disease. Such cases consequently are included in tables of work injuries and are excluded from tables of occupational diseases.
